

FlexCabling

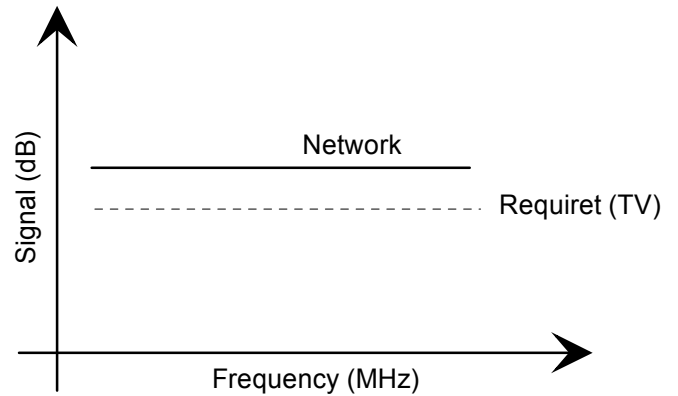

Without amplifier

Principal drawing of the TV and Radio signal in a coax and network cabling (Ethernet), without a amplifier.

With amplifier

Principal drawing of the TV and Radio signal in a network cabling (Ethernet), with a FlexCabling certified amplifier, and a FlexCabling certified broadband matching filter.

Description

The signal loss in a network cabling, not only depends on cable length, but also the frequency - much more then a traditional coax cabling.

With the right amplifier and a broadband matching filter, the signal not only amplifies, but also equalises.

Transmission media: min. C5e network cable
